

FlexGas™

Non-Haz Gas Panel & FlexPower™ Controller

Gas Panel Purity Standard Configurations

- UHP: panels & manifolds are orbitally welded/VCR® construction, 316L SS [10Ra]
- CLASS 100/CLASS 10 clean room assembly and test

UHP Gas Panels Standard Configurations

- 1-Valve design
- 2-Valve design
- 3-Valve design [HP vent]
- 4-Valve design [adds PURGE]
- 5-Valve design [adds LP VENT]
- 6-Valve design [adds EVAC]

UHP Gas Panels Options

- 5 RA surface finish
- Dual stage regulators
- Outlet Filters
- DISS cylinder fittings
- Cylinder Scales
- Pressure relief valves
- Exhaust pressure switch
- HI cylinder pressure switch
- HI delivery pressure switch
- Excess flow sensor
- Restrictive flow orifices

FlexGas™ makes it easy to meet your exact gas delivery needs. Our modular design concept allows you to use a building-block method to configure a gas panel to your specifications....."no more paying way too much for a system that far-and-away exceeds your requirements." Start by choosing one of several configurations. Begin customizing right at the gas panel level by selecting the gas panel purity. From the standard 3-Valve UHP panel, you can choose to add PURGE capability (4-Valve) or PURGE/ EVAC capability (6-Valve). Add safety and peace-of-mind with the optional FlexPower™ Controller. Simply select which panels you want to shutdown on ALARM, and they will be fitted with a normally closed ESO Valve for automatic shutdown.

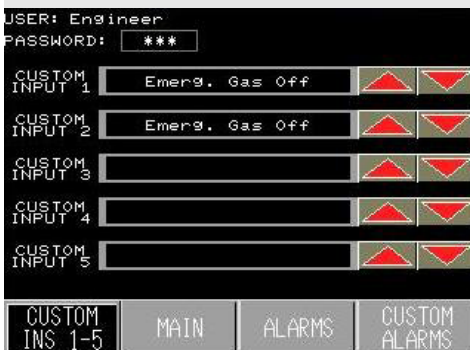

FlexGas™ 6-Valve Panels
& FlexPower™ Controller

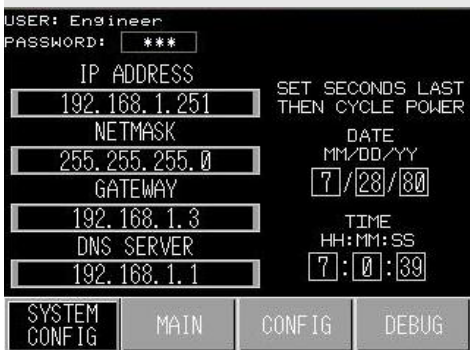

The ESO Controller supports configurable dry-contact alarm inputs and outputs. Exhaust pressure switch, gas leak detection, & UVIR are just some of the optional controls components available to prompt shutdown.

FlexPowr™ Controller

- Automatic shutdown of process gas panels
- User-definable alarms
- User-definable outputs
- SCADA compliant using Modbus TCP
- Audible/visible alarm indication
- EMO button
- Multilevel password protection
